## Reeling Capability

In the core level, under the shields, are 4 pairs and 6 strength members, 3 white and 3 yellow. Two central strength members perform "tension relief" function. The other four are twisted around the pairs, each pair is wrapped in a strength member to perform "pair structure holding" function. The reason for two types of strength members; each one has a different prolongation constant, one positive, the other negative, so on average the length of the strength members is constant and equal to the wire length.

To install this cable for reeling purposes the following guidelines are stated.

- Minimum reel core diameter is 10 cm.
- Minimum tension used during reeling and un-reeling process.
- Terminate the cable with plugs before reeling initiated.
- Cable length per reel is less than 90 metre.
